

Ideation Phase

Empathize & Discover

PROJECT TITLE	YOLO based weapon detection
DATE	2/11/2023
TEAM ID	Team-592614
MAX MARKS	4 marks

EMPATHY MAP:

An empathy map canvas is a collaborative tool used to gain a deeper understanding of a user's needs, wants, and motivations. It is a visual representation of a user's thoughts, feelings, actions, and environment. Empathy maps are often used in the context of design thinking, where they can help to inform the development of new products, services, or experiences.

Key elements of an empathy map canvas:

- Thinks: What the user is thinking about, both consciously and subconsciously.
- Does: What the user does, both in terms of their observable Behaviours and their internal processes.
- Feels: What the user feels, both emotionally and physically.
- Pain Points: What causes the user pain or frustration.
- Gains: What the user hopes to achieve or gain.
